

DANILLO OLIVEIRA

OBJECTIVE

Seeking a **Data Engineer** position where I can contribute to scalable and efficient data solutions using modern cloud technologies and pipelines.

PROFESSIONAL SUMMARY

Data professional with experience since 2007 in data environments, currently focused on Cloud Data Engineering (Azure, Fabric, Databricks). Undergoing a structured career transition while expanding technical skills through hands-on projects, automation, and the development of modern data pipelines. Known for clarity, organization, and collaborative leadership.

CERTIFICATIONS

- DP-600: Fabric Analytics Engineer Associate (expected Aug 2025)
- DP-700: Fabric Data Engineer Associate (expected Sep 2025)
- AZ-900: Azure Fundamentals (expected Oct 2025)
- DP-900: Azure Data Fundamentals (expected Nov 2025)

SKILLS AND COMPETENCIES

Data Platforms:

- Hands-on experience with **Microsoft Fabric** and **Azure Synapse** for end-to-end analytical pipeline development.
- Knowledge of **Databricks** and **Snowflake** focusing on scalable architecture and query optimization.

PRACTICAL PROJECTS (ONGOING PORTFOLIO)

Projects in progress: GitHub repositories created as part of a practical portfolio currently under development. Follow their real-time evolution through the links below.

Executive Analytics Dashboards with Microsoft Fabric and Power BI

Development of executive dashboards focused on performance, using semantic modeling, KPIs, and optimized queries for large data volumes.

Technologies: Power BI, Microsoft Fabric, DAX, Tabular Editor, ALM Toolkit e DAX Studio

🔗 <https://github.com/danillobsoliveira/executive-analytics-fabric-powerbi>

Enterprise Multilevel Sales Data Lakehouse

Simulation of a real-world multilevel sales environment (distributors, resellers, targets, repurchases) and construction of a **complete Data Lakehouse** — from raw data ingestion to visualization in Power BI.

Technologies: Python, SQL, Azure Data Factory, Microsoft Fabric, Power BI

🔗 <https://github.com/danillobsoliveira/enterprise-multilevel-sales-datalakehouse>

Real-Time Inventory Forecasting and Replenishment Pipeline

Development of a continuous inventory monitoring system with real-time alerts based on consumption, historical trends, and seasonality.

Technologies: Kafka, Azure Event Hubs, Spark Streaming, Azure Synapse, Power BI Streaming e Azure Functions

🔗 <https://github.com/danillobsoliveira/real-time-inventory-forecasting-replenishment>

Enterprise Data Governance & Catalog with Azure Purview

Development of a unified data catalog integrating technical and business metadata to democratize data access and usage across the organization.

Technologies: Azure Purview, Fabric, Azure SQL, KQL, RBAC, Power BI

🔗 <https://github.com/danillobsoliveira/enterprise-data-governance-catalog>

ETL/ELT and Orchestration:

- Building efficient pipelines using **dbt**, integration with **Airflow** and **Synapse Pipelines**.
- Automation of ingestion, transformation, and loading routines emphasizing **reusability** and **version control**.

Programming Languages:

- Strong proficiency in **SQL** for data manipulation, analysis, and relational/analytical modeling.
- Development with **Python** and **PySpark** for ETL scripting, automation, and handling large data volumes.
- Practical use of **DAX** and **Power Query M** for semantic modeling and transformation in Power BI.
- Writing **KQL** queries for log analysis and monitoring in Azure Monitor.

Data Architectures:

- Understanding and application of **Data Warehouse**, **Data Lakehouse**, and **Data Mesh** concepts in real projects.
- Implementation of **data layers (Bronze, Silver, Gold)** in ingestion and transformation pipelines.

Data Modeling:

- Experience with dimensional modeling (star schema) for BI projects and analytical performance.
- Knowledge of **Data Vault** and **3NF modeling** for transactional environments and historical integration.

PROFESSIONAL EXPERIENCE

February 2013 – Present

Nawt's Life Cosméticos - São Paulo, Brazil

Regional Sales Supervisor

Led commercial operations and direct sales teams in the professional cosmetics sector. Responsible for training resellers, developing new leaders, and managing product distribution logistics across multiple regions in Brazil. The role demanded strong interpersonal skills, strategic vision, and process organization.

- **Built and led high-performance sales teams**, focusing on commercial training, leadership development, and structuring independent sales groups. Played a key role in training leaders and supervisors, contributing to regional brand expansion.
- **Managed product distribution and replenishment**, organizing local and regional logistics based on real consumption, regional demand, and sales behavior. Applied data-driven restocking strategies adapted to seasonality and each point-of-sale profile.
- **Prepared sales reports, targets, and accountability statements** by consolidating team performance data and reporting results to regional leadership. Developed internal controls and dashboards that improved visibility into key performance indicators and supported sales cycle management.

February 2010 – December 2012

Sunset Comunicação - São Paulo, Brazil

DBA | SQL Server (Database Administrator)

Technical role in data projects focused on advertising and marketing, emphasizing information integration, automation of routines, and support for data-driven campaigns.

- **Designed data models for CRM and marketing projects**, structuring information to enable smart segmentation, predictive analytics, and personalized campaign strategies.
- **Developed and maintained data pipelines**, optimizing ETL workflows between legacy systems and analytical platforms, with a focus on scalability, reliability, and performance.
- **Integrated systems and synchronized data** to ensure consistency and integrity across multiple databases and applications.
- **Created and maintained scripts for task automation and data integration**, including exception handling and bug fixes.
- **Proactively monitored and tuned database performance**, fine-tuning queries, indexes, and structures to maximize efficiency and minimize latency.
- **Developed backend systems for integrated solutions** such as corporate intranets and high-traffic microsites, with special attention to data architecture.
- **Performed execution plan analysis and resolved bottlenecks in complex queries**, utilizing tools and best practices for troubleshooting and optimization.
- **Automated administrative routines with custom scripts**, reducing manual effort and increasing operational efficiency.
- **Managed incidents and resolved technical issues related to databases**,

Databases

- Experience with **SQL Server**, **Azure SQL**, and **MySQL** for OLTP and OLAP projects.
- Familiarity with **Cosmos DB** for semi-structured data applications on Azure.

Business Intelligence:

- Development of interactive **Power BI** dashboards with advanced use of **DAX** and table relationships.
- Proficient with tools like **DAX Studio**, **Tabular Editor**, **VertiPaq Analyzer**, and **ALM Toolkit** for model optimization and governance.

Streaming and Real-Time Data:

- Practical knowledge of **Apache Kafka** and **Azure Event Hubs** for real-time data ingestion.
- Experience with **Spark Streaming** for continuous low-latency processing.

Governance and Security

- Application of **Azure Purview** for data cataloging and compliance.
- Access control and management with **RBAC** in Azure environments.
- Practical knowledge of **LGPD/GDPR** for building secure solutions.

Monitoring and Quality:

- Configuration of **Azure Monitor** for log analysis and alerting in production environments.
- Creation of validations and tests in pipelines to ensure **data quality**.

ensuring high availability and service continuity.

- **Administered SQL Server environments**, including installation, configuration, preventive maintenance, backup routines, and secure restore strategies.
- **Produced detailed technical documentation of processes and integration scripts**, promoting standardization and facilitating collaborative technical support across teams.

January 2009 – October 2010

ARVOS, LLC - São Paulo, Brazil

Database and Quality Assurance - Trainee

Provided technical and operational support for a data integration project among insurance companies, focusing on data consolidation, quality improvement, and workflow automation.

- **Participated in a strategic data integration project between insurers** aimed at consolidating information to recommend personalized plans for clients of the brokerage MDS Brasil.
- **Contributed to requirements gathering and process mapping meetings**, helping improve data quality and consistency.
- **Received specialized training in BizTalk Server**, focusing on integration between heterogeneous systems and automation of corporate data flows.
- **Executed data transfer and transformation processes between systems**, ensuring data integrity, consistency, and alignment with business needs.
- **Organized and categorized data** to facilitate structured storage and efficient information retrieval through relevant classifications.

June 2007 – November 2008

Proxis – São Paulo, Brazil

Database Intern

Provided technical support in market intelligence projects, data automation, and SQL Server database administration focused on campaigns for major clients.

- **Participated in data modeling projects and development of strategic reports**, supporting market intelligence and decision-making areas.
- **Developed ETL pipelines for transactional and analytical environments**, applying best practices for data quality and performance.
- **Orchestrated, scheduled, and executed data workflows** using DTS and SSIS tools, integrating multiple data sources.
- **Created scripts to automate data reconciliation and standardization tasks**, reducing errors and increasing analysis reliability.
- **Contributed to database marketing initiatives** focused on segmentation and personalization for clients such as Fiat, Toyota, and Samsung.
- **Supported SQL Server administration**, including backup, restore routines, and performance monitoring, ensuring environment stability.

EDUCATION

Bachelor's Degree in Information Systems

UNIP, São Paulo, Brazil

Jul 2008 – Jun 2012

DevOps and DataOps

- Pipeline versioning with **Git** and CI/CD implementation using GitHub Actions.
- Project structuring focused on **modularity, reuse, and automated testing**.

Soft Skills and Leadership:

- **Technical leadership** in challenging environments with a focus on delivery.
- **Clear and concise documentation** facilitating alignment between technical and business teams.
- **Proactive, resilient, and continuous improvement-oriented mindset**.
